

IGOR TRON

Technical Lead | Senior PHP / WordPress Engineer

Tbilisi, Georgia • root@itron.pro • +995 59 10-50-120 • [LinkedIn](#) • [GitHub](#) • [WordPress.org](#) • [Telegram](#)

PROFILE

Hands-on Technical Lead and Senior PHP/WordPress Engineer with 18+ years in web development, including EPAM and Cointelegraph. Experienced in leading teams, delivering complex WordPress projects, and improving high-traffic platforms. Combines technical leadership with hands-on implementation and independent ownership, from architecture to production operations. Builds reusable AI-assisted workflows that help agencies and product teams reduce repetitive work while keeping testing, review, and engineering judgment in the loop.

SELECTED ENGINEERING HIGHLIGHTS

- **Technical leadership:** Led engineering teams and guided architecture for a shared WordPress platform powering dozens of related sites.
- **Enterprise scale:** Worked on a platform supporting 150+ brand sites and contributed to a separate platform managing approximately 7,000 WordPress sites.
- **AI-assisted delivery:** Reduced selected recurring setup and implementation workflows from 10+ days to 1–2 days using reusable agent skills, with human review and quality controls.
- **Production safeguards:** Implemented role/capability controls, hardened CI/CD, strict file permissions, and controlled WordPress configuration to reduce unauthorized or accidental production changes.
- **Content automation:**

PROFESSIONAL EXPERIENCE

Lead WordPress Engineer | Cointelegraph

2023–2025

New York, United States / Remote

- Led task planning, architecture decisions, code reviews, mentoring, and technical debt management for a small engineering team.
- Led architecture for a shared codebase, reducing duplication across related sites and making long-term maintenance more predictable.
- Improved high-traffic platform performance and reliability through query optimization, Cloudflare caching, S3 offloading, MySQL replication, and Elasticsearch/Algolia integration.
- Diagnosed production issues across PHP, MySQL, caching/CDN, search, and infrastructure, tracing root causes across system layers.
- Improved Core Web Vitals through asset bundling, critical/deferred CSS, cache tuning, and layout stabilization.
- Built reusable skills and project-specific workflows for Codex and Claude Code to automate repeatable WordPress setup and implementation work.
- Delivered automated and semi-automated import pipelines for continuously updated content.

PROFESSIONAL EXPERIENCE — CONTINUED

PHP Software Engineer | EPAM Systems

2021–2023

Moscow, Russia / Herceg-Novi, Montenegro

- Worked on a shared WordPress platform supporting 150+ brand sites from one repository, with standardized CI/CD for reusable development and consistent deployments.
- Contributed to a separate enterprise platform managing approximately 7,000 WordPress sites with individual databases and architecture designed for maintainability at scale.
- Developed custom themes, plugins, drop-ins, Gutenberg components, and REST API extensions for enterprise clients including Bacardi and Thomson Reuters.
- Refactored database queries and application logic to improve admin responsiveness and unauthenticated request processing; optimized object/page caching and Algolia search.
- Developed a custom-table WordPress extension to model new relationships between core entities, simplifying application code and reducing database operation costs.

PHP & WordPress Specialist | Independent / Freelance

2009–2021

Worldwide

- Built and launched hundreds of WordPress sites, custom themes, plugins, and integrations, from landing pages to corporate websites.
- Migrated a publishing website from Django to WordPress, modelling tens of thousands of records with custom post types, taxonomies, and custom tables.
- Migrated hundreds of LiveJournal posts and comments to WordPress, preserving content structure, discussion threads, media, and SEO where possible.
- Introduced PHPUnit and WordPress unit-test suites to catch regressions earlier and support a test-driven engineering approach.

CORE SKILLS

WordPress & PHP: PHP 7/8, custom plugins/themes/MU-plugins, Gutenberg, REST API, WP-CLI, Multisite, hooks/filters, custom tables.

Data & Search: MySQL/MariaDB, Elasticsearch, Algolia, query optimization, replication.

Delivery & Infrastructure: Composer, Docker, nginx, Git/GitFlow, GitHub Actions, CI/CD, Cloudflare, Amazon S3.

Quality & Reliability: PHPUnit, WordPress unit tests, TDD, OOP/SOLID, Xdebug, profiling, Core Web Vitals, caching/CDN, production debugging, fault-tolerant architecture.

Frontend: JavaScript, HTML5, CSS/SCSS.

AI-assisted Engineering: Codex, Claude Code, reusable agent skills, project-specific workflows, implementation and review automation.

OPEN SOURCE & COMMUNITY

- Contribute to WordPress Core through Trac tickets, some resulting in implemented changes.
- Author and maintainer of open-source WordPress plugins and PHP libraries.
- Participated in WordPress community events, including speaking at WordCamp Russia.

EDUCATION

Moscow Government Social University — Moscow, Russia, 2006
